

Just like a cell phone, our bodies need charging too! In order to use your phone, it must remain charged. Keeping our bodies' cells measured at 70-90 millivolts is important to maintain optimal health.

**Cells in Body
Require Recharge**

**Cell Phones
Require Recharge**

The EESystem doesn't target a particular part of the body, but instead creates an optimal environment by producing **Scalar Waves** and **Biophotons**, promoting the cells' innate intelligence to reach the charge of 70-90 millivolts.

By doing so, the body is able to function optimally to provide benefits throughout the body.
